## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 5-8, 12-14 and 16-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Jordan (Pat.4,135,393). Jordan discloses the claimed invention, including:

- A frame as in element 2 having a pair of ends 3 and 5, adapted to engage a said stressed cable (Claim 1), a jack 7 mounted on said frame between it's ends for applying a force on the stressed cable, and measuring means as in element 11 on said frame, for measuring the deflection of the stressed cable.
- A hook as in element 3, said hook connected to said jack 7 and adapted for engagement with said stressed cable 1(Claim 2).
- The force of said jack 7 (Col. 4, lines 4-7), is applied to the stressed cable through the hook means (Claim 3).
- A jack (Claims 5,12 and 16) that applies a pre-set force to the stressed cable (Col. 3, lines 26-28).
- Measuring means (Claims 6, 13 and 17) as in element 11 that includes a gauge (Col. 3, lines 29-34) mounted onto said frame.

Art Unit: 2855

- Regarding claims 7, 14 and 18, the disclosed reference inherently shows in Fig. 1 that the frame 2 is shaped in a "V" shape.
- Claim 8 discloses a method for detecting the amount of tension in a stressed cable using the claimed apparatus that is inherently disclosed in the provided reference.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 4, 11 and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jordan in view of Hensler (Pat 4,746,024). Jordan discloses the claimed invention, except for:

- A jack, that is a hydraulic jack.

Hensler teaches a tensiometer that is a hydraulic tensiometer with a hydraulic jack. It would have been obvious at the time the invention was made to one having ordinary skill in the art to alter the device disclosed for the purpose of providing hydraulic means in the tensiometer of Jordan using Hensler's teachings to make a device with less demanding features in order to make the appropriate measurements in an easier manner and with more accuracy.

***Claim Objections***

Claims 9 and 10 are objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim.

Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. The claims refer to claim 7 as method claims with limitations for a method that is not disclosed in said claim, referring also to limitations not present in claim 7.
